**PeePod is the perfect
“first responder” for
urinals with a problem**

PeePod™ powerpoint overview

1. Who to contact when selling the PeePod™
2. How the PeePod™ works
3. How to determine if a urinal needs PeePod™
4. How to install the PeePod™
5. How often to change the PeePod™
6. Testimonials

Who to contact?

- The main person you want to target with the PeePod™ is the maintenance director of the property. They understand the drainage issue on plugged up urinals.
- Key points to mention are that Roto-Rooter services will need to come every 6 months and often cost up to \$300 per visit if the urinal were to plug up
- Housekeeping would be the next department to talk to about these issues, but try to stick with the maintenance directors

How the PeePod™ works

- Works with 98% of the US water based urinals

Highlight points

- The PeePod™ has a green fragrance bar on the front that neutralizes the odor in the men's restroom in less than 7 minutes after installation
- The PeePod™ has a chemical chamber in the back that contains "AS-ESA". An acid based cleaning chemical that is released with every flush of the urinal. It will remove any hard water buildup, stains and slow flowing drains

How the PeePod™ works

PeePod™ can remove hard build up of urine salts and also remove stains from urine and minerals in the water

Miami police station PeePod before/after

How the PeePod™ works

With regular use of the PeePod™ you can prevent these issues from happening as seen in the photos

Build up in the pipes

Flooding urinals

How to determine if a urinal needs PeePod™

- Every urinal can have three main problems
 1. Dirty urinals stained from urine and hard water build up
 2. Stinky urinals that are full of odor causing bacteria
 3. Plugged urinals that stop flushing and flood the restroom floor

Pop Quiz:

You go into men's restroom and there are three urinals;
urinal A is closest to the door,
urinal B is in the middle and
urinal C is farthest from the door

Question: Which urinal gets used the most?

Pop Quiz Answer:

Answer: Urinal A.

Men always used the nearest urinal

Urinal A by the entry door get's used 10 times more often than other urinals

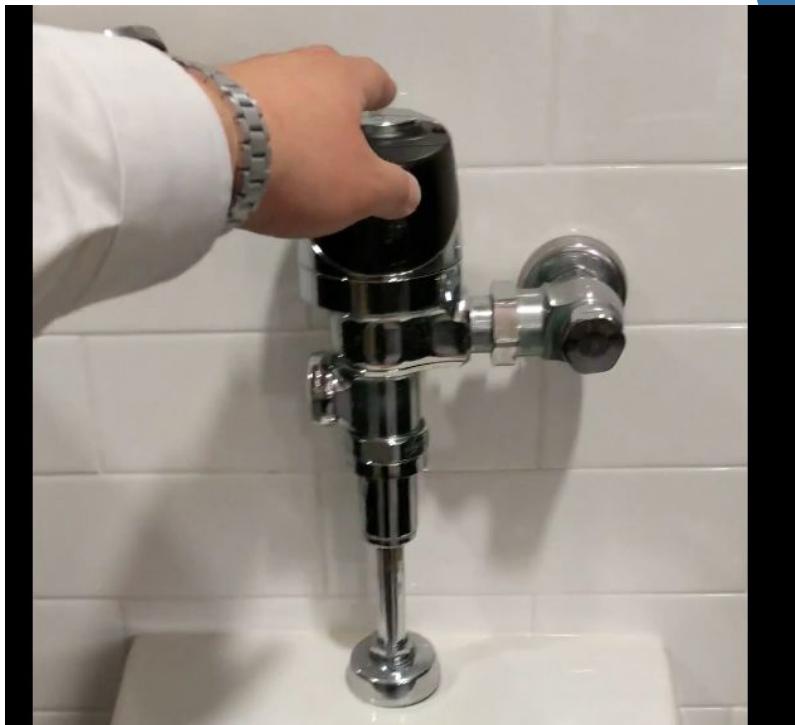

Urinal C get's used the 2nd most frequently

How to determine with a three flush test

- The three flush test
 - Manually flush the urinal three times in a row, with a three second count in between flushes
 - Watch the water flow into the drain of the urinal, see if the water is raising up and not draining correctly.
 - This indicates that the urinal that is having a flow issue due to buildup in the pipes

How to determine with a three flush test

- Manually flush the urinal three times

How to determine with a three flush test

1,

2,

3,

- YouTube 3 Flush Test:

https://youtu.be/kPMxKGNNhtw?si=d6FXUxAkptL8xO_7

- Watch for poor draining and rising water level. This indicates that the urinal has restricted water flow and is in need of the PeePod™

How to install the PeePod™

- Take the PeePod™ out of the blue bag packaging
- Open the green fragrance bar packaging at the tear notch provided on packaging
- Open the grill of the PeePod™ from the bottom lip
- Lift the front grill off the PeePod™
- Place opened fragrance bar onto PeePod™
- Replace front grill cover back onto PeePod™ & click into place
- Bend metal pin at the narrow shaft backwards 45-90 degrees
- Use blue bag as a glove, and insert PeePod™ into upper flush hole
- Press bent metal pin against wall of urinal and slide into upper flush hole
- The pressure of the bent pin will hold the PeePod™ in place
- Flush urinal and make sure no splashing is occurring.
